Bolter Technologies

We start with the process that is costing you time, not time, not the technology. Then we automate it, ship it, ship it, and stay on the hook for it.

Bolter Technologies is a software and technology company built around a simple idea: technology should make life easier for everyone. We work across AI, automation, software development, data analytics, and cyber security, helping businesses turn ideas, inefficient processes, and complex data into practical systems that actually work.

14

Projects in the portfolio

5

Practice lines, one team

What we commit to in writing

01

A dedicated point of contact

You will have a clear point of contact throughout the project who understands your requirements, decisions, and progress. You will always know who to speak to when you have a question, need an update, or want to make a decision.

02

Clear pricing by phase

Before each phase begins, you will know what we are delivering, what it will cost, and what assumptions the price is based on. If a change affects the scope, timeline, or cost, we will discuss and agree it with you before carrying out the additional work.

03

You own what we build

The software, designs, documentation, and project deliverables created specifically for you belong to you, subject to the terms agreed in your contract. We will provide the access and documentation you need to operate, maintain, and continue developing your solution.

04

Support beyond delivery

Our involvement does not have to end when the project goes live. We provide a proper handover and can continue supporting, maintaining, improving, and expanding your solution through an ongoing support arrangement when your business needs it.

One practice, five depths

Software development, AI automation, data analytics, and cyber security.

01	Software development LEAD PRACTICE		03 PROJECTS
02	AI solutions 8 CAPABILITIES		03 PROJECTS
03	AI & business automation 9 CAPABILITIES		02 PROJECTS
04	Data analytics 10 CAPABILITIES		04 PROJECTS
05	Cyber security 7 CAPABILITIES		03 PROJECTS

Software development

We design and build reliable software around the way your business actually works. From websites and customer-facing platforms to internal systems, business applications, APIs, and custom tools, we take projects from idea and requirements through development, testing, deployment, and handover.

SELECTED WORK

LTE Trove

PSX Portfolio Tracker

Zenith

TYPICALLY BUILT WITH

Next.js · React · TypeScript · JavaScript · Node.js · Python · FastAPI · Django · Flask · PHP · Laravel · Java · Spring Boot · C# · .NET · C++ · Go · Rust · HTML · CSS · Tailwind CSS · shadcn/ui · PostgreSQL · MySQL · MongoDB · Redis · SQLite · GraphQL · REST · Docker · AWS · Azure · Google Cloud · Vercel · GitHub Actions

WHAT IT INCLUDES

- 01 Websites, web applications, SaaS platforms, and customer portals
- 02 Internal business applications, dashboards, and custom tools
- 03 REST APIs, backend systems, databases, and third-party integrations
- 04 Authentication, user management, payments, notifications, and business workflows
- 05 Modernising legacy applications and replacing spreadsheet-based processes
- 06 Cloud deployment, performance optimisation, monitoring, and technical documentation

AI solutions

We turn AI from an experiment into something your team can actually use. We identify where AI can create measurable value, select the right models and approach, and build the applications, workflows, safeguards, and evaluation needed to put it into production.

SELECTED WORK

- Cortex Strike
- EchoHunt
- RetinaScan AI

TYPICALLY BUILT WITH

Python · TypeScript · JavaScript · OpenAI · Anthropic · Google Gemini · Meta Llama · Mistral · LangChain · LangGraph · LlamaIndex · Hugging Face · PyTorch · TensorFlow · scikit-learn · Pandas · Polars · FastAPI · PostgreSQL · MongoDB · Redis · Pinecone · Qdrant · Chroma · pgvector · Docker · AWS · Azure · Google Cloud

WHAT IT INCLUDES

- 01 AI assistants, copilots, and intelligent business applications
- 02 LLM integrations and AI-powered features inside existing software
- 03 Document processing, extraction, classification, and summarisation
- 04 Retrieval-augmented generation (RAG) and knowledge-based systems
- 05 AI agents and multi-step task automation
- 06 Model selection, prompt engineering, evaluation, and monitoring
- 07 Human-in-the-loop workflows for decisions that require oversight
- 08 AI integration with internal systems, databases, APIs, and business tools

AI & business automation automation

We automate repetitive work that consumes your team's time, connecting the systems, data, and processes already in your business. The goal is not simply to remove a manual step, but to build a reliable workflow that can run consistently with the right level of human oversight.

SELECTED WORK

Current by Logmate
Tenant Management System

TYPICALLY BUILT WITH

Python · TypeScript · JavaScript · Node.js · FastAPI · Django ·
Temporal · Celery · Redis · RabbitMQ · Apache Kafka · n8n ·
Zapier · Make · Power Automate · REST APIs · GraphQL · Webhooks ·
PostgreSQL · MySQL · MongoDB · AWS · Azure · Google Cloud ·
Docker · GitHub Actions

WHAT IT INCLUDES

- 01 Business process discovery and workflow mapping
- 02 End-to-end workflow automation
- 03 AI-powered document and data processing
- 04 Invoice, billing, reporting, and approval automation
- 05 CRM, ERP, email, spreadsheet, and API integrations
- 06 Scheduled jobs, background processing, and event-driven workflows
- 07 Automated notifications, alerts, data synchronisation, and reporting
- 08 Human approval steps where automation should not make the final decision
- 09 Monitoring, error handling, logging, and operational handover

Data analytics

We turn disconnected, messy, or underused data into information your team can trust and act on. From data pipelines and database design to analytics, dashboards, forecasting, and machine learning, we build the systems that make your data useful for everyday decisions.

SELECTED WORK

- DCAS
- PKNVD
- Enterprise Omnichannel Media & Social Analytics Platform
- Enterprise Real-Time Website Analysis Dashboard

TYPICALLY BUILT WITH

Python • SQL • Pandas • Polars • NumPy • scikit-learn • PyTorch • TensorFlow • Jupyter • dbt • Apache Airflow • Dagster • Apache Spark • Apache Kafka • DuckDB • PostgreSQL • MySQL • Microsoft SQL Server • Oracle • MongoDB • Redis • ClickHouse • Snowflake • BigQuery • Amazon Redshift • Power BI • Tableau • Metabase • Looker • AWS • Azure • Google Cloud

WHAT IT INCLUDES

- 01 Data collection, cleaning, transformation, and integration
- 02 ETL and ELT pipelines for structured and unstructured data
- 03 Data warehouses, databases, and analytical data models
- 04 Business intelligence dashboards and management reporting
- 05 Data correlation, trend analysis, and performance measurement
- 06 Forecasting, classification, anomaly detection, and predictive models
- 07 Machine learning models and analytical automation
- 08 Data quality, validation, governance, and monitoring
- 09 Analytics APIs and data services for integration into applications
- 10 Turning operational data into measurable business insights

Cyber security

We help you find and close the gaps before someone else does, from applications and infrastructure to the processes around them. That means real testing against real systems, monitoring that catches what matters, and platforms built for teams whose job is defence and compliance rather than product features.

SELECTED WORK

Bolter SIEM

Enterprise Cyber Complaint & Content Governance Dashboard

Threat intelligence and adversary tracking platform

TYPICALLY BUILT WITH

Python · FastAPI · TypeScript · React · PostgreSQL ·
Elasticsearch · MITRE ATT&CK · STIX/TAXII · NIST NVD · CISA KEV ·
Docker · AWS · Azure · Google Cloud

WHAT IT INCLUDES

- 01 Penetration testing and vulnerability assessment for applications and infrastructure
- 02 Threat intelligence, adversary tracking, and vulnerability data platforms
- 03 SIEM, log correlation, and user and entity behaviour analytics
- 04 OSINT, domain and asset intelligence for attack-surface visibility
- 05 Cyber regulatory, compliance, and complaint governance platforms
- 06 Secure-by-design application development and code review
- 07 Incident response tooling, audit trails, and reporting

How we work

01

Discovery

We start by understanding what you are trying to achieve and how the work happens today. For larger or more complex projects, we map the process, identify the real requirements, and work out the right technical approach before development begins.

02

Plan & Scope

We turn the requirements into a clear plan with defined deliverables, timelines, and pricing. For phased projects, each phase has an agreed scope and cost, with assumptions and uncertainties made clear from the start.

03

Build & Deliver

We build the solution in practical stages and show you working progress along the way. You stay involved throughout the process, so feedback can be addressed early rather than waiting until everything is finished.

04

Handover & Support Support

Once the project is delivered, we provide the necessary documentation, access, and handover so your team can use and manage the solution confidently. If you need ongoing maintenance, improvements, automation, analytics, or technical support, we can continue through an ongoing support arrangement.

How you can engage us

START YOUR JOURNEY HERE

Discovery & Planning

Not sure where to start, or have an idea that needs to be shaped into a practical solution? We work with you to understand the problem, define what needs to be built, identify the right technology and approach, and create a clear plan for execution. This is ideal for larger or more complex projects where getting the direction right before development can save time and cost.

TERMS

Typically 1–2 weeks, priced according to project requirements.

MOST COMMON

Build & Deliver

From a small task that simply needs to get done to a complete software, AI automation, or data analytics solution, we build what your business needs and take it through to delivery. We work in clear phases with defined deliverables, keeping you involved throughout development while handling the technical work from start to finish. This is the right fit when you have a project that needs to be built, improved, automated, or brought to life.

TERMS

Priced per project, with larger engagements structured into clear delivery phases.

AFTER LAUNCH

Ongoing Support

Some solutions need more than a one-time delivery. We stay involved to maintain, improve, monitor, automate, and support your digital systems over time, whether that means ongoing software development, AI automation, data analytics, digital marketing, or operational support. This is ideal for businesses that need a reliable technology partner without building a full in-house team.

TERMS

Monthly retainer, with scope and support level agreed based on ongoing requirements.

Cortex Strike

Autonomous penetration testing agent

CLIENT

Government and critical infrastructure — name withheld

YEAR	DURATION	STATUS
2026	1 year	Delivered

An AI agent that plans and runs real, multi-tool penetration tests through one conversation, keeping a full audit trail of every scan, finding and report.

90+

security tools an operator can run through one AI-guided conversation

24+ hrs

longest autonomous assessment run without operator intervention

~20%

better results than the same tools driven by hand

OPERATOR MANUAL EFFORT PER FULL ASSESSMENT (HOURS) 96 → 12 -87%

Bolter SIEM

SOC monitoring and UEBA analytics

CLIENT

In-house product

YEAR	DURATION	STATUS
2025	8 months	Delivered

A SIEM and UEBA platform that correlates millions of events per second from Elasticsearch, unifies fragmented device identities, and cuts SOC analyst triage time.

1,000,000+

security events indexed and queryable per second

~65%

reduction in mean time to detect via live detection streams

100%

device identity unification across multi-agent telemetry sources

MEAN TIME TO INVESTIGATE INCIDENT (MINUTES)

88 → 19

Current by Logmate

Billing and recovery platform

CLIENT

Logmate Engineering and Services Private Limited

YEAR	DURATION	STATUS
2026	13 weeks	Ongoing

An automated electricity billing and payment-recovery platform for a multi-site commercial mall, handling tiered billing, invoicing, multi-channel delivery and bank reconciliation for 250+ tenants.

250+

tenant accounts billed automatically every month

~70%

less manual effort spent on billing and reconciliation

100%

of bills calculated, generated and delivered without manual entry

24/7

automated bank payment reconciliation

MONTHLY BILLING & RECONCILIATION TIME (HOURS)

92 → 18

-80%

EchoHunt

Digital discourse monitoring

CLIENT
Government and public sector communications — name withheld

YEAR	DURATION	STATUS
2025	10 months	Delivered

An AI platform that watches Twitter, Instagram, YouTube and Facebook for emerging narratives in real time and hands communications teams a ready-to-execute counter-narrative strategy.

180,000+
posts collected, enriched and analysed

4
platforms monitored at once — Twitter, Instagram, YouTube, Facebook

100%
of the core pipeline runs on local infrastructure, no cloud required

TIME FROM NARRATIVE EMERGENCE TO COUNTER-RESPONSE (HOURS) 94 → 12 **-87%**

Enterprise Cyber Complaint & Content Governance Dashboard

CLIENT

Telecommunications & Cyber Regulatory Governance — name withheld

YEAR	DURATION	STATUS
2024	8 weeks	Delivered

A real-time cyber complaint tracking and regulatory governance platform that automates multi-platform violation workflows, cloud evidence archiving, and executive compliance analytics.

90%

reduction in complaint processing and administrative turnaround time

1,095+

violating content items and accounts tracked and resolved

100%

audit readiness and tamper-proof evidence archiving on Azure

<1s

real-time alert latency across analyst consoles

COMPLAINT TURNAROUND TIME (HOURS)

- SheetJS

LTE Trove

Virtual 4G network lab

CLIENT

Telecommunications — name withheld

YEAR	DURATION	STATUS
2026	6 months	Delivered

A cloud-native 4G LTE simulation platform and browser-managed network operations centre that provisions multi-node EPC networks and validates 3GPP signalling without any RF hardware.

100%

software-defined RF simulation, no physical hardware dependency

< 3 min

to provision and orchestrate a full multi-node virtual EPC and RAN

7

automated 3GPP milestone verification suites, M1 to M7

LAB SETUP & 3GPP REGRESSION TEST DURATION (HOURS)

In our clients' words

CURRENT BY LOGMATE

“This product has effectively reduced our workload workload by three quarters.”

Hamid Mehmood

CHIEF OPERATING OFFICER, LOGMATE

ENTERPRISE CYBER COMPLAINT & CONTENT GOVERNANCE DASHBOARD

“Boltertech delivered an enterprise platform that transformed our compliance monitoring capabilities. The combination of real-time data data visualizations, cloud evidence storage, and automated reporting has reporting has given our team unprecedented control and clarity over digital over digital content governance.”

Hasib Ahmad

TEAM LEAD, DEVTROVE

ENTERPRISE OMNICHANNEL MEDIA & SOCIAL ANALYTICS PLATFORM

“Bolter Tech delivered a tailored solution that completely transformed how our newsroom and marketing teams track audience engagement. Having our 8 major channels reporting real-time metrics in a single, high-speed dashboard has significantly improved our decision-making speed.”

Fayyaz Siddiqui

MEDIA NETWORK DIRECTOR, CSCCC

ENTERPRISE REAL-TIME WEBSITE ANALYSIS DASHBOARD

“BolterTech transformed our website evaluation workflow into a seamless, single-pane-of-glass dashboard. Their expertise in modern React architectures and intuitive SOC design made this project an outstanding success.”

Asif Usman

LEAD SECURITY & OSINT ANALYST, TENBYTES

Questions we get asked

Who owns the code and the intellectual property?

You do, on final payment, in full. That includes the source, the infrastructure definitions, and the documentation. We keep no licence over your systems and we do not reuse client code in other engagements.

How do you scope and price a project?

We start with a conversation to understand what you need, how the work is done today, and what the project needs to achieve. We then turn that into a written scope with clear deliverables, timelines, assumptions, and pricing, with larger projects broken into defined phases. If something changes along the way, we discuss the impact on scope, timeline, and cost before doing the additional work, so there are no unexpected charges.

Can you work with our existing systems, or do we need to start from scratch?

We can work with what you already have. Whether you need to improve an existing application, connect different systems, automate a manual process, add AI capabilities, or build something completely new, we first assess your current setup and recommend the most practical approach. We do not rebuild something from scratch simply because it is easier for us.

What timezone overlap do we actually get?

We operate in UTC+5. That is a full working morning overlapping Europe and an afternoon overlapping the US East Coast. We commit to a fixed daily overlap window in writing before a project starts rather than leaving it to chance.

Do you use AI to write our code, and will you tell us?

Yes, we use AI tools where they can improve speed, research, testing, documentation, and development efficiency. AI-generated work is reviewed, tested, and validated by our engineers before it becomes part of your solution, and we remain responsible for the quality, security, and functionality of what we deliver. If AI is used in a material part of your project, we will be transparent about how it is being used and what human review is applied.

What if our needs change during the project?

We plan in phases and communicate regularly, so changes can be discussed and incorporated as we go. If something new is needed, we will clarify the impact on scope, timeline, and cost before proceeding.

Start a project

Tell us what is slowing your team down. We reply within one business day.
